

Permanent Repair For Damaged Pipe

ARMORPLATE®

Presented by:

COMPOSITE REPAIR PRODUCT FOR DAMAGED OR CORRODED PIPE

ArmorPlate® is a flexible, composite wrap that is used to repair pipelines, risers, and process piping that have external corrosion or other damage with up to 80% wall loss. ArmorPlate® is DOT approved and is considered to be a permanent repair.

FLEXIBLE FOR MANY ONSHORE AND OFFSHORE APPLICATIONS

Unlike systems that are limited by the geometry of lines, ArmorPlate® can be installed on virtually any line segment, including elbows, tees, and bends. ArmorPlate® can also be applied to "hot" surfaces as well as underwater.

PRODUCTS AVOIDS COSTLY SHUT-IN

ArmorPlate® can be installed under most conditions in a short time frame with no special equipment required. Likewise, there is no "hot" work or multiple trade skills necessary. Most importantly, there is no need to depressurize or shut-in as would be the case if the damaged line was replaced.
