

# RISERWRAP™

Presented by:

## RISERWRAP OFFERS ADVANCED CORROSION PROTECTION

RiserWrap™ incorporates advanced composite technology to produce a tough and durable coating which provides long-lasting corrosion protection even in marine or other demanding environments. RiserWrap™, which is patent protected, is flexible and can be applied to irregular shapes, unlike other, rigid corrosion protection products. It can be applied offshore in the splash zone and even underwater. It also has numerous onshore applications, such as pipelines and process piping, where traditional coatings have failed to provide long term corrosion protection.

## RISERWRAP™ IS EASY TO APPLY

RiserWrap™ consist of a specially blended epoxy adhesive, RiserBond®, which is used in conjunction with fiberglass cloth to create a laminate. RiserBond® is applied to the pipe to be protected and then alternating layers of fiberglass cloth and RiserBond® are applied. An inhibitor is incorporated into the RiserBond® in order to reduce the effects of ultraviolet ray degradation.

## RISERWRAP ELIMINATES RISER & PIPELINE MAINTENANCE

RiserWrap™ is offered in kits, consisting of a flexible fiberglass cloth and a specially-blended two part epoxy adhesive. Offshore operators and pipeline companies are choosing RiserWrap™ because it eliminates the need to periodically replace coatings or wraps and that translates into significant savings.
